

Union Internationale des Sociétés de Transport Combiné Rail-Route

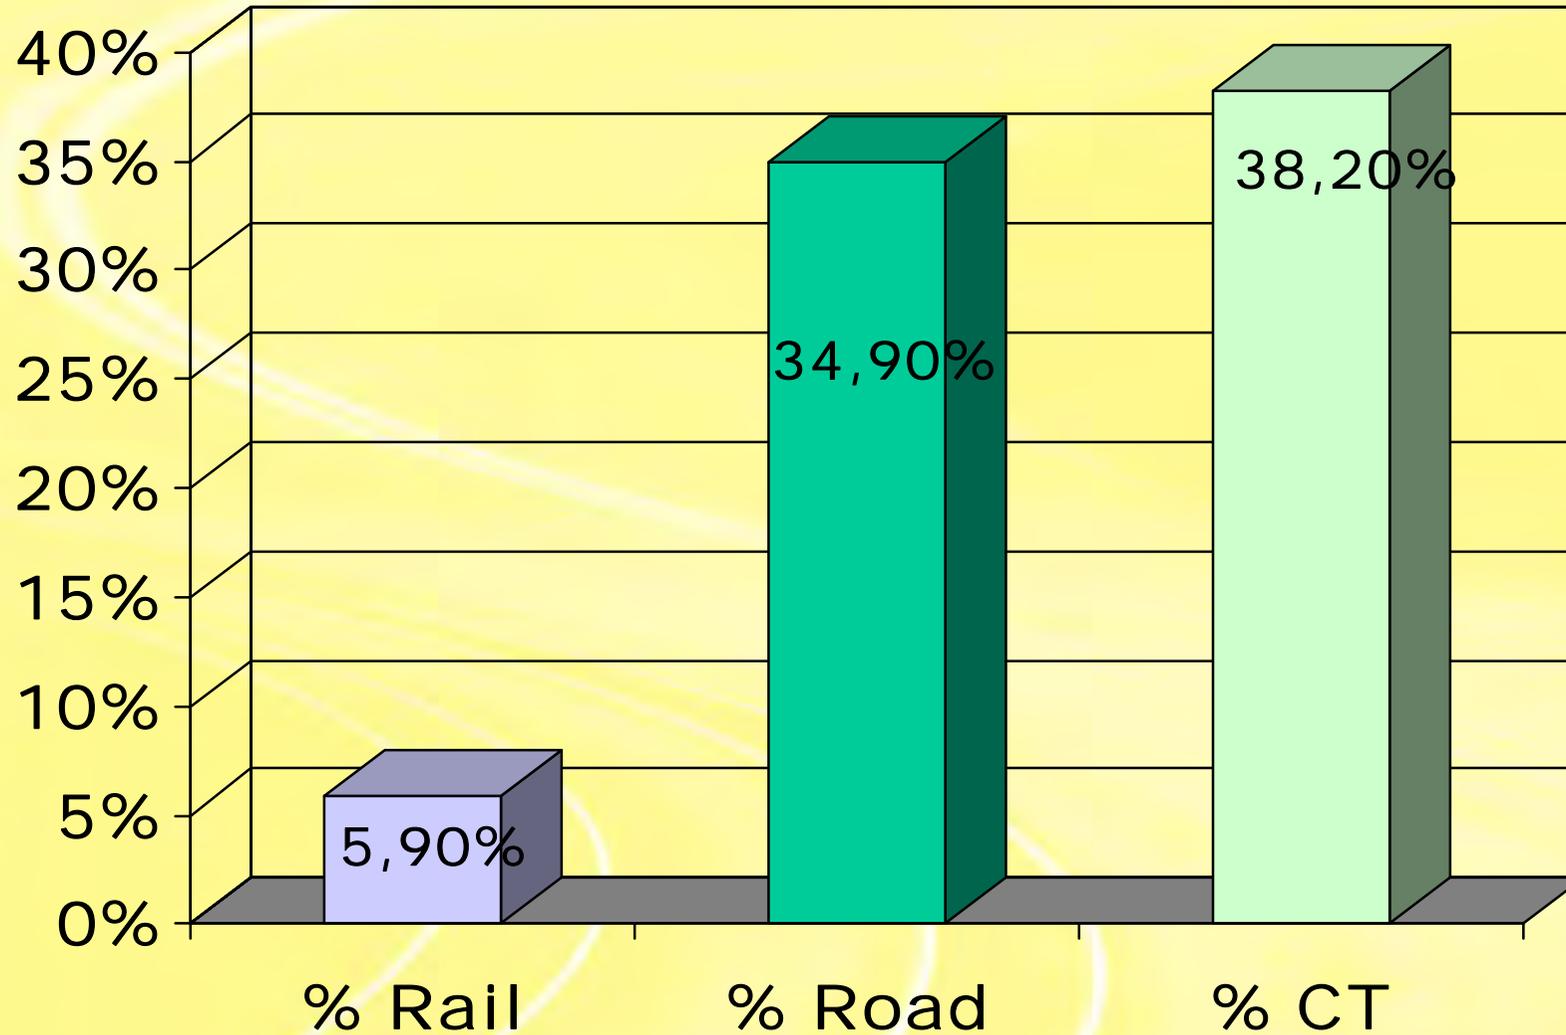

Cooperation as key to shift traffic
from road to rail

Martin Burkhardt

LOGITRANS
Istanbul – 28.09.2006

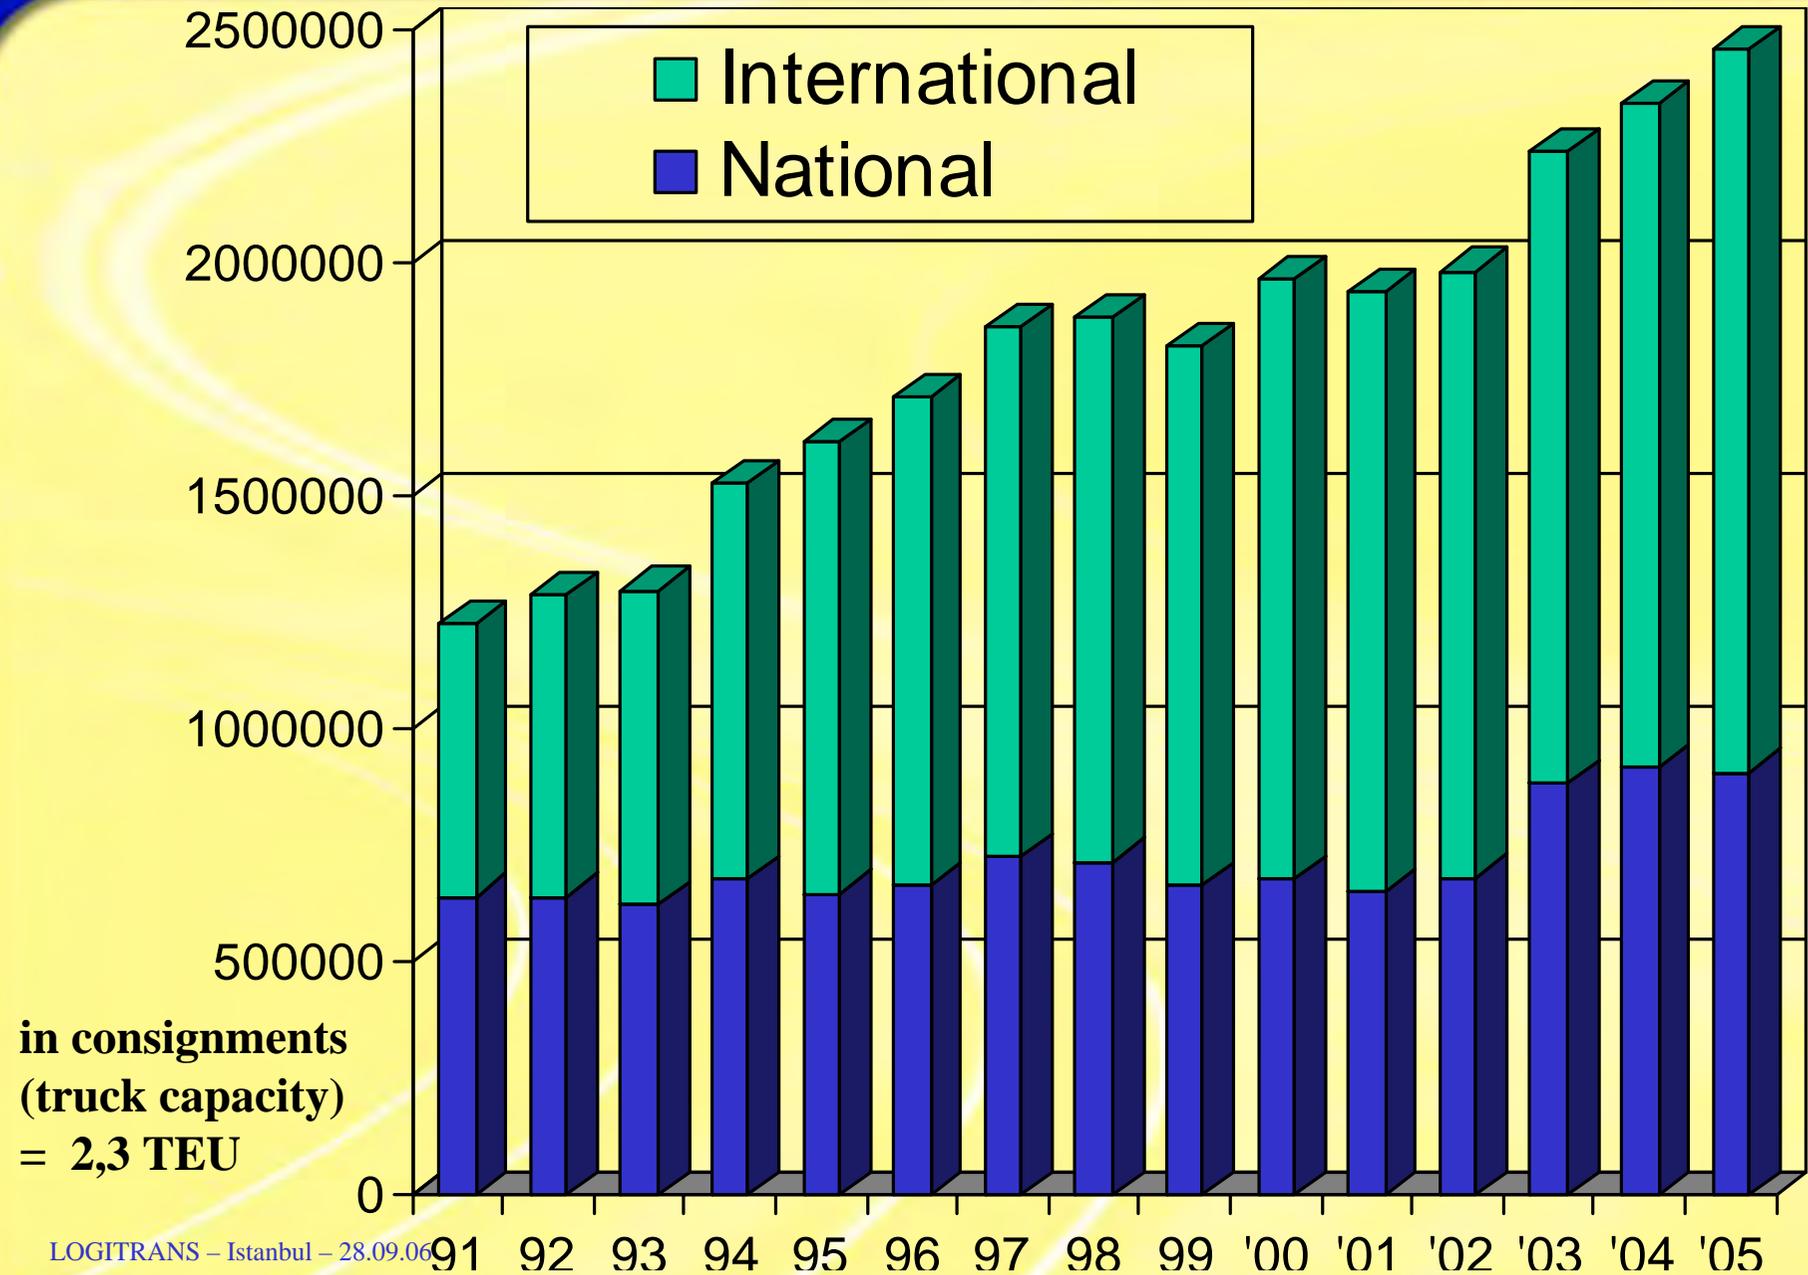

TKM Evolution per transport mode (1995-2004)

Source: EU Pocket Book 2004 & UIRR statistics

Statistics 1991-2005

Importance of Combined Transport

Traffic of UIRR members

- 10.000 truck loads daily on long distances
- 500 complete trains each work day
- 2/3 of CT brought to rail by operators

Total combined traffic

- Part of rail traffic 20% of tkm freight
- Part of transalpine traffic 10 to 20%

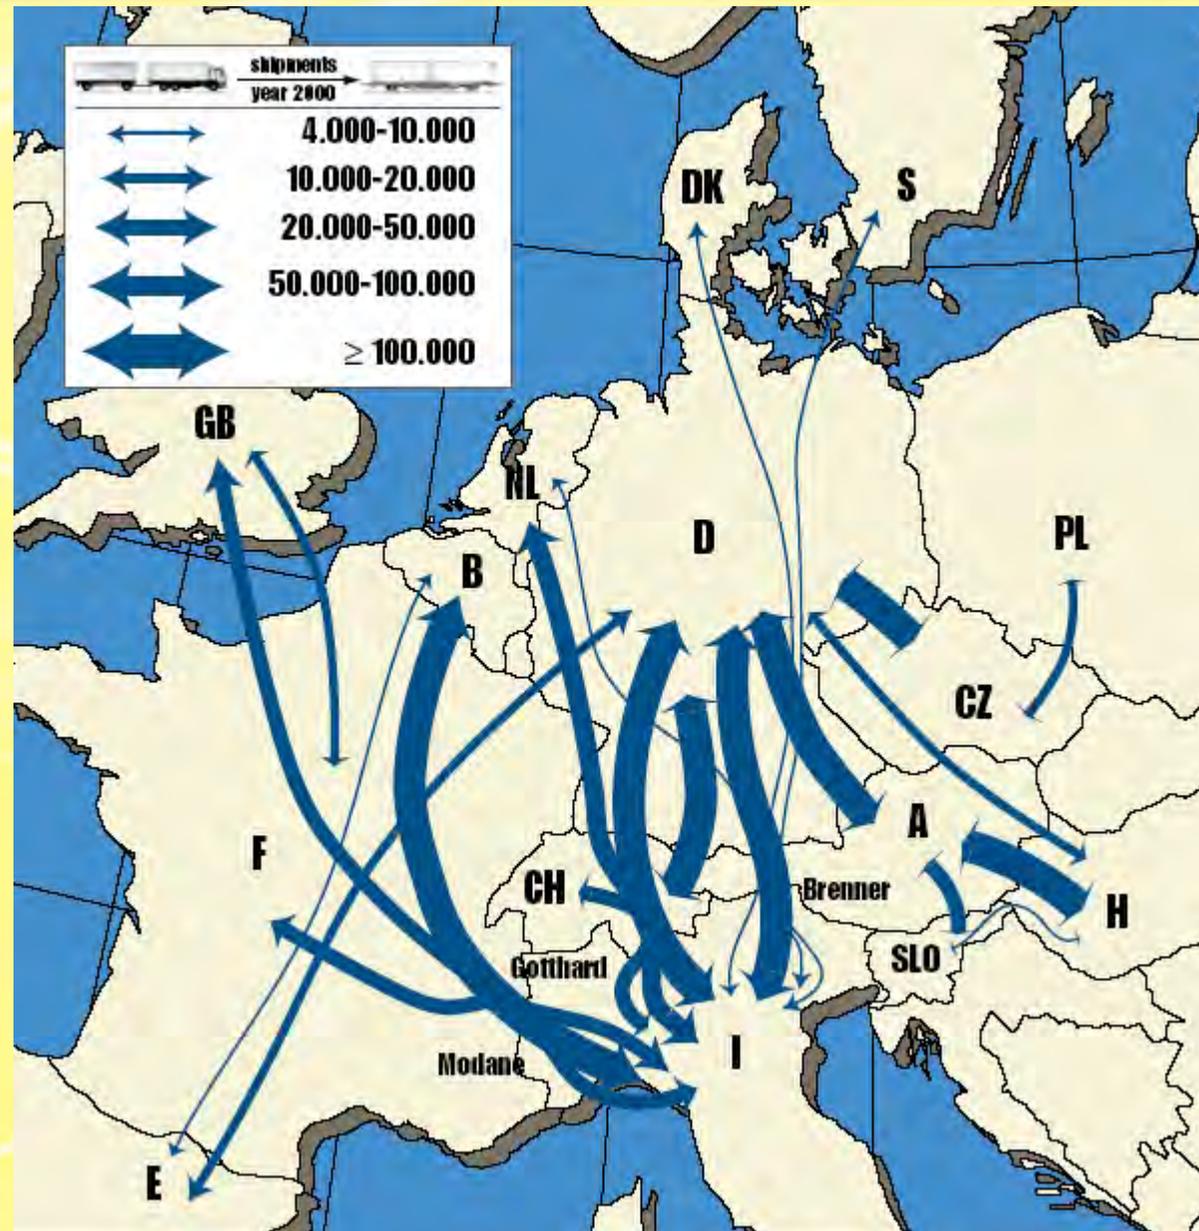

UIRR Members

Main traffic flows: transalpine

Incentives for Combined Transport

Problems on road

- **Rising road tolls and fuel prices**
- **More controls of resting times, speed limits**
- **Limited road permissions**
- **Night or week-end traffic bans**
- **Road capacity limits, traffic jams**

Advantages of rail

- **More capacity and flexibility**
- **More traffic with less investment**

Two-level organisation (decentralised structure)

Liaison Office Brussels

- ⇒ overall promotion of CT
- ⇒ coordination of members' activities
- ⇒ service centre (projects, reports)

Member Companies

- ⇒ 20 CT operators
- ⇒ organising and marketing of CT
- ⇒ wagons in ownership – management of transhipment yards (terminals)

Cooperation road/rail

Cooperation in the capital

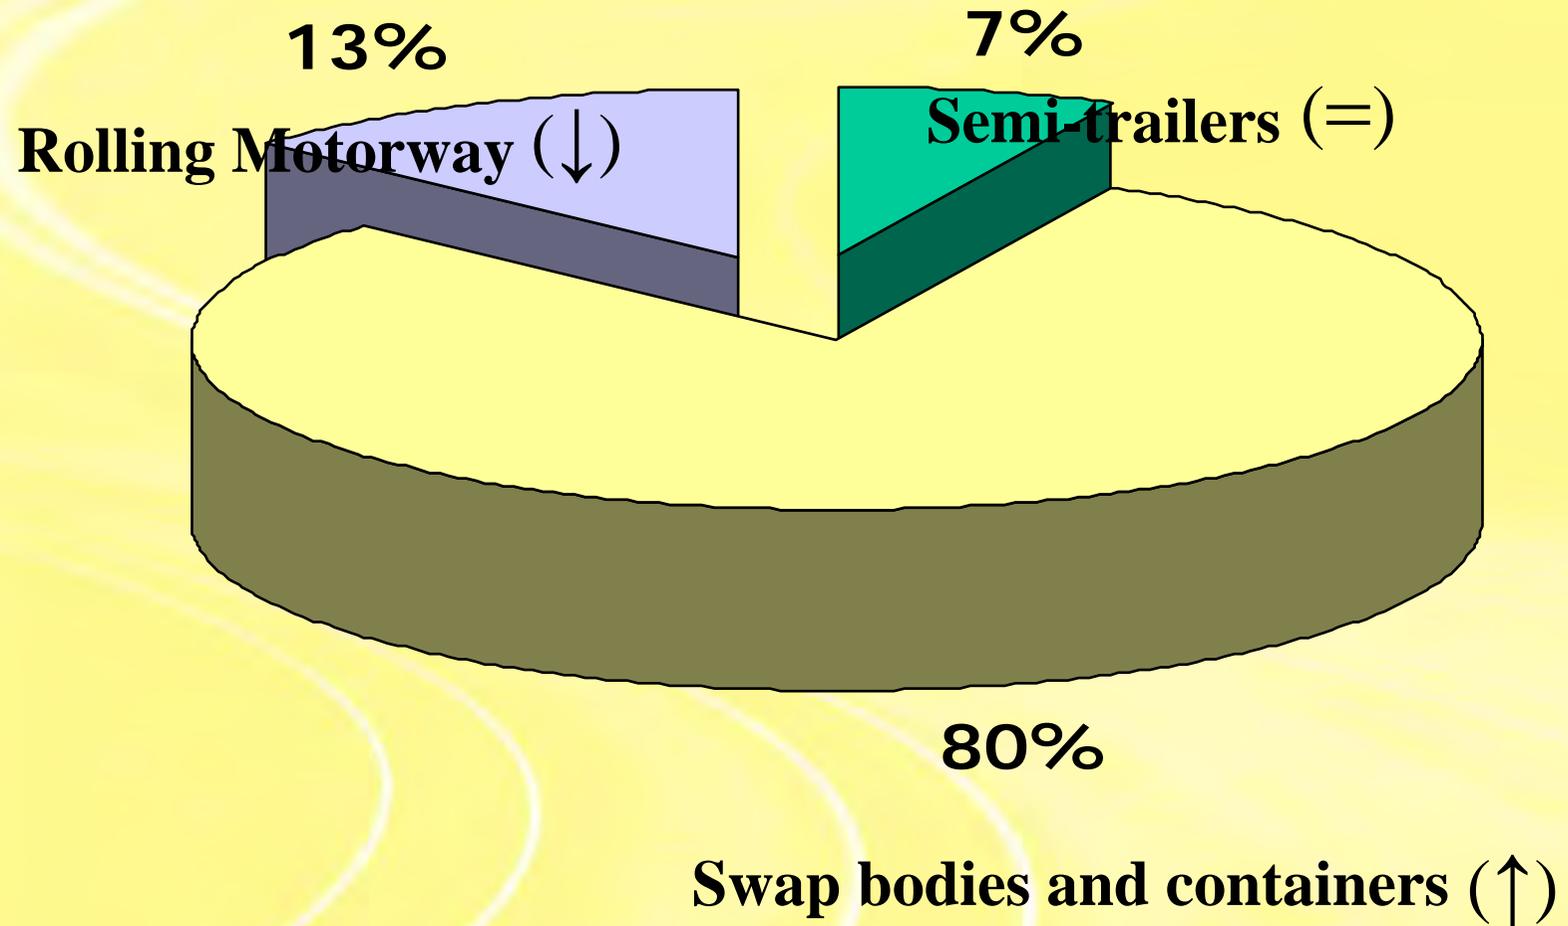

- **Logistic and road haulage companies**
- **Railway companies**
- **UIRR partner operators**

Philosophy

- **Neutral Operator, manages traffic on rail, wagons, terminals**
- **Customer invests in loading units**
- **Operator will not directly deal with shippers**

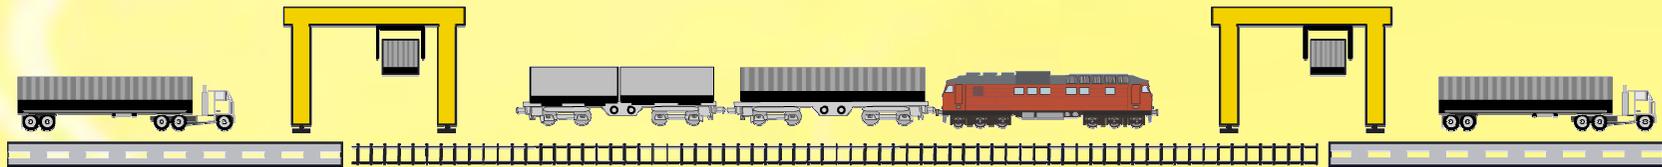

Techniques (2005)

CT Techniques: chain

Unaccompanied Transport (*only loading unit*)

Differences in:

- road and rail distances
- equipment / transshipment yards
- type of wagons
- markets

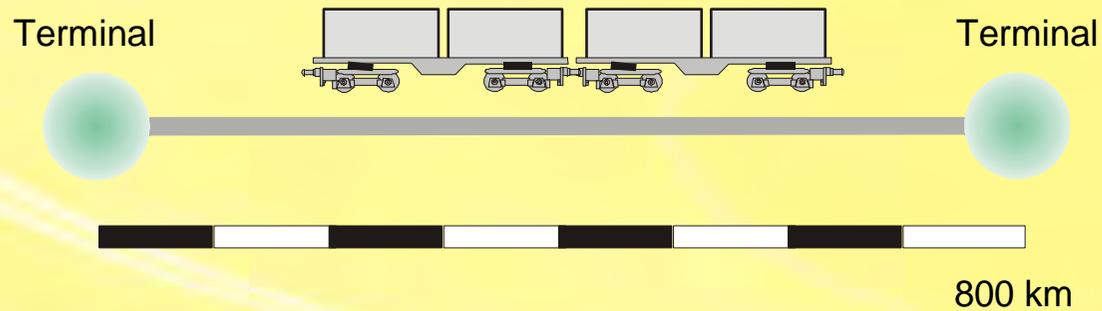

Accompanied Transport (*full truck with driver*)

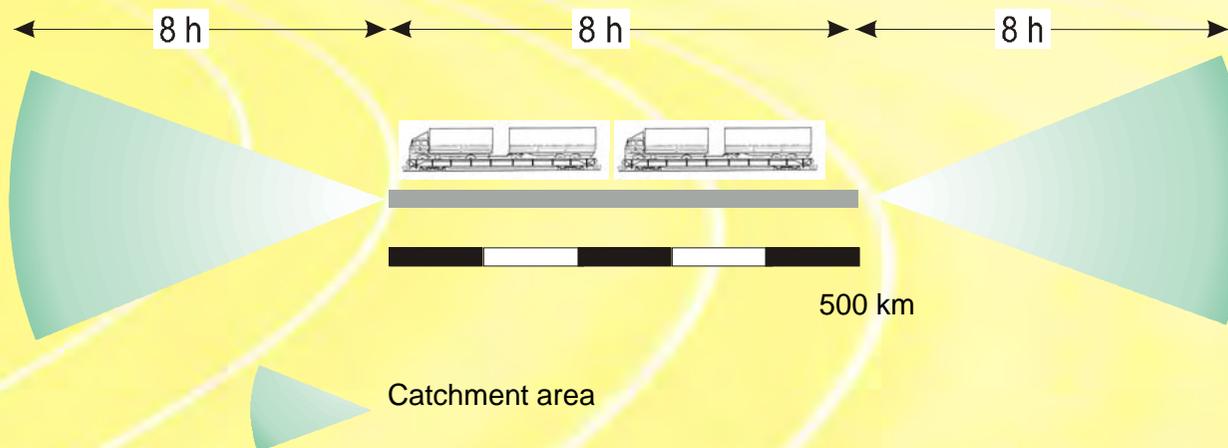

CT Techniques: catchment area

Unaccompanied Transport (*only loading unit*)

Accompanied Transport (*full truck with driver*)
