

UNECE:
**53rd Meeting of the Intermodal Transportation
and Logistics Working Party**

Geneva, 4 October 2010

Ákos Érsek
PR & Research Officer

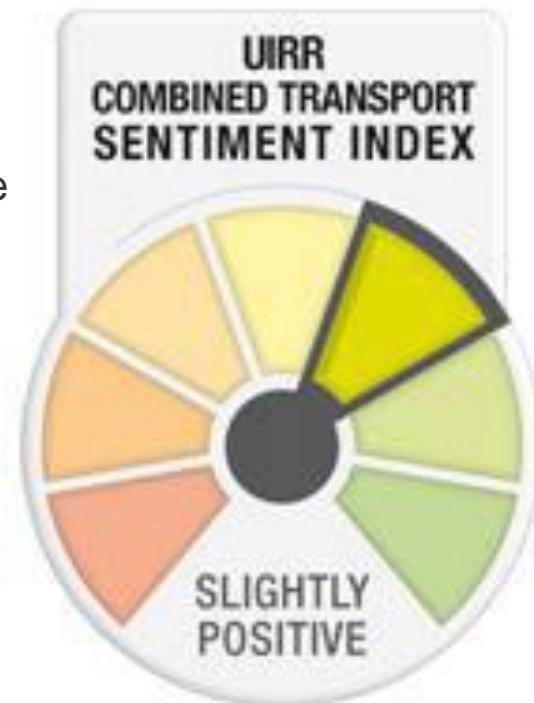

Post-crisis recovery: Cautiously optimistic

Crisis results

- Road Hauliers offer below-cost prices
- Political efforts to support road sector (postponed toll increases and internalisation measures, easing in taxation)
- Railways are not favoured (under squeeze like budgets – price increases)
- 17% decline in road-rail combined transport
(2009 over 2008 in tonne-kilometres)

The recovery

- CT Operators protected as many services as possible
- Since H1. 2010: increased frequencies and new services offered
- Preliminary statistics suggest a double digit rebound in 2010
- CT operators are cautiously optimistic (situation differs from country-to-country, conditions remain fragile)

Transport statistics in Europe: Difficult to see clearly

EUROSTAT / European Commission data

- National data versus Pan-European data
- Categories of measurement: tonnes versus tonne-kilometres
- Missing categories: distance-based breakdown, taxpayer spending on transport infrastructure
- Insufficient human resources devoted to transport data-collection

National data

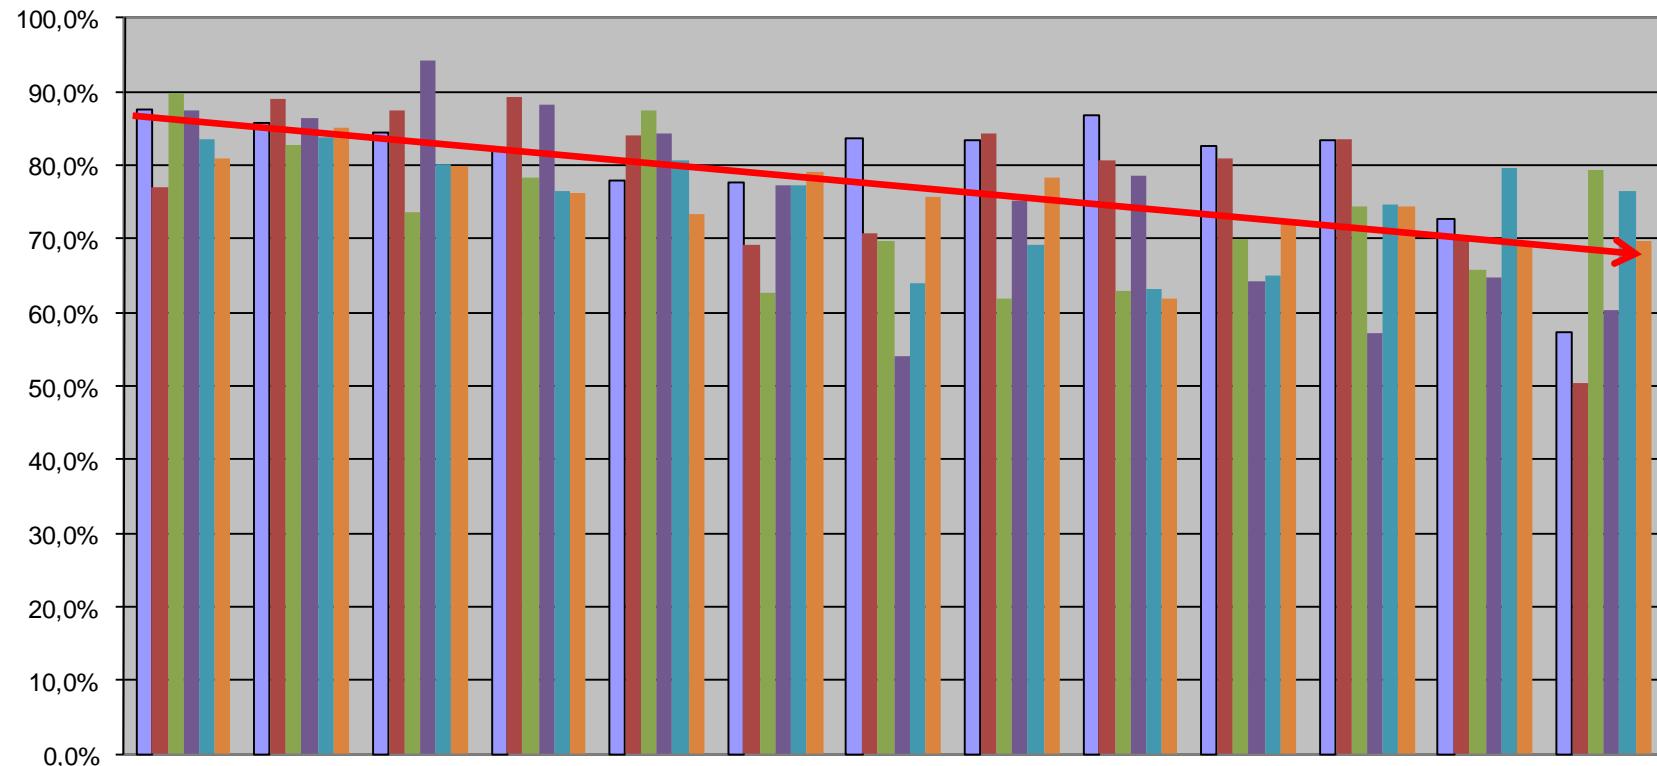

- Some (!) countries with excellent data collection practice (Germany)
- Limited willingness to disclose data to EU: legislation on EU level, but financing individually by Member States

Industry data-collection

- AEA (aviation) statistics (a best practice benchmark)
- IRU (road) statistics
- UIC (rail) statistics
- UIRR Quality Monitoring Scheme

Corridors: D-I ; NL-I ; B-CH ; B-I

Upcoming political initiatives: Promising for rail ?

Infringement procedures on compliance with first railway package legislation

- Directive 2001/12/EC (development of the Community's railways),
- Directive 2001/13/EC (licensing of railway undertakings) and
- Directive 2001/14/EC (allocation of infrastructure and levying of charges).

Recast of first railway package (proposal unveiled on 19 September)

- Three directives into one

Revival of the **Eurovignette amendment** (Belgian EU Presidency)

Directive on establishing a **Single European Railway Area**

New EU White Book on Transport Policy (to be published in 2011)

UIRR Position Paper: Rail Infrastructure July 2010

Position on improving productivity and competitiveness

- European definition of **train categories and their hierarchy**.
 - Responsibility of Member States clearly declared to **maintain the nominal technical (design) parameters of their rail infrastructure network**, and restoring these within reasonable time.
 - The obligation to expand infrastructure capacity (within a reasonable period of time) in case of saturation of rail traffic should be moved from rail infrastructure managers to directly the Member States.
 - Member States should be required to prepare, beyond their ERTMS convergence schedules, a **comprehensive rail interoperability plan** (within a reasonable time-span).
- **A detailed reporting regime should be required from rail infrastructure managers** whereby they would have to prepare regular (1-3 monthly) reports on a wide set of performance indicators (to be audited by the independent national rail regulators).

Position on the enforcement of European rules

- Legislation presently existing in a Directive form should be re-enacted as a European Regulation, which would leave considerably **reduced room for national interpretation of the European rules**.
- The **independence of rail regulatory bodies from the government entities** which exercise ownership rights and/or award public service and/or multi-annual rail infrastructure management contracts should be ensured in their budget approval, appointment of their leading staff, and professional oversight. (European railway watchdog)

Eurovignette amendment: Long overdue

The Commission's proposal of 8 August 2008

- Already overdue in 2008
- Inclusion of CO₂ emissions missing
- EP first reading vote vs Council position: congestion, accidents, earmarking
- IRU (ProgTrans Study) attacks CE Delft Internalisation Handbook and JRC Study
- Hopes: Belgian Presidency negotiates consensus in Council by the end of 2010

More political action needed

- New externality category: cost of oil dependence
- European-level agreement on transport taxation:
 - Fuel excise tax: to cover externalities related to the burning of oil-based fuels
 - Tax (VAT, excise tax) exemption of aviation (at least within Europe) cancelled
 - Ownership-related taxes (registration, trafficworthiness exams, etc) should be reduced to fees covering the costs of these government mandated services
- Distance-based (electronic) tolling on all roads for HGVs
- All non-oil related externalities internalised in the road tolls
- Systematic but temporary relief measures for rail until equalisation for road is implemented

Grassroots improvements: Project-work

EU projects

- Be-Logic: a logistics planning tool for small businesses
- IMCOSEC: security best practice for container transport-chains
- Marco Polo: SEEIS, Ro-Mo-Net
- Project supervisory function in several more projects

Industry-level activities with railway sector

- UIC/Diomis
- TAF TSI SEDP
- Technical matters: consolidation of loads, noise/braking

Intra-industry (road-rail Combined Transport) activities

- Dangerous goods group
 - Operations group
 - Technical group
 - CIS/CESAR system: a tracking & tracing solution
- 
- The diagram shows a bracket grouping the first three items of the list (Dangerous goods group, Operations group, and Technical group) under the heading "Intra-industry (road-rail Combined Transport) activities". The CIS/CESAR system is listed separately below the bracket.
- developing and disseminating best practice

2010: ANNIVERSARY YEAR OF 40 YEARS OF UIRR (1970-2010)
